

## ENDOFINE® VERT FOLIAR INOCULANT

# Reducing Environmental Stress In Plants By Working With Mother Nature

**EndoFine Vert is applied to foliage for a variety of crops and is a naturally occurring beneficial fungal inoculant that rapidly colonizes plant tissues and establishes a symbiotic relationship reducing environmental stress**

**EndoFine Vert®** is a naturally occurring, beneficial fungal organism that is used as a plant foliar inoculant. EndoFine benefits the plant in several ways:

- the rapid colonization of stems and leaf tissues in a mutually beneficial relationship
- improving nutrient uptake by plants
- improving plant health and disease resistance to organisms such as Botrytis and Fusarium
- improving plant tolerance to environmental stresses such as drought that can promote diseases

### Foliar Inoculant:

- foliar spray, drench or dip
- enhances vigor, fitness and productivity of field and greenhouse crops.
- can be used with rooting hormones
- rapidly colonizes plant wounds and grafts

EndoFine Vert offers growers an innovative natural product that helps meet the consumers demand for environmentally friendly agricultural and horticultural crops (Strawberries, Grapes, Greenhouse Vegetables) cereal crops.
